Subject: Proposal – AI-Assisted Connected Patient Flow System for JPMC

Dear Sir/Madam,

I hope you are doing well.

We are reaching out to share our proposal for an **AI-Assisted Connected Patient Flow System** for Jinnah Postgraduate Medical Centre (JPMC).

The proposed system is designed to improve the patient journey and reduce operational delays across OPD and Emergency workflows. It brings together digital registration, token and queue management, real-time doctor availability, access to patient history and reports, digital prescriptions, payment and discharge workflows, along with controlled AI-assisted support.

Rather than proposing an immediate hospital-wide implementation, our approach is to begin with a **controlled pilot in one OPD and one Emergency Department workflow**. This would allow JPMC to assess the system in a real working environment, measure its impact, obtain staff feedback, and evaluate the results before considering further expansion.

We have attached our **High-Level Implementation, SDLC & Commercial Proposal**, which outlines the proposed scope, implementation plan, system architecture, security and clinical-safety controls, testing, training, timeline, and indicative commercial framework.

We would appreciate the opportunity to present the proposal to the relevant JPMC management, clinical, and IT/HIS representatives and discuss the possibility of taking this initiative forward.

Thank you for your time and consideration. We look forward to hearing from you.

Kind regards,

Tayyaba Ramzan
